Abstract (en)
A slide rail is intended for use in an extensible table and is composed of a sliding seat and two sliding supports. The sliding seat is provided with two guide rails, two guide slots, and a gear. The sliding supports are provided respectively with a plurality of sliding wheels and a rack. The sliding supports are joined with the sliding seat such that the racks of the sliding supports are engaged with the gear of the sliding seat, and that the sliding wheels are capable of sliding along the guide rails. The stationary leaves of the extensible table are slidably fastened with the slide rails and are therefore capable of sliding in opposite directions to accommodate an extension leaf. <IMAGE>
