Abstract (en)

[origin: EP0848930A2] A device for changing the position in height of a dishwasher rack (C) slidably mounted on a guide (G) through wheels (4), including a support and guide bracket (1), a plate (2) provided with means for coupling to the rack (C), a latch (3) interposed between said guide (1b) and said plate (2) and integral with the latter, as well as a spring biasing the latch (3) against the bracket (1). The latter consists of a lower elongated support (1a), on which the wheels (4) are secured, and an upper guide (1b), on which there is vertically slidably inserted the plate (2). The guide (1b) is provided with a locking tooth to lock the latch (3) and therefore the rack (C) at a raised position, while the disengagement of the latch (3) is performed through a window (5) by acting on its lower end (3b). <IMAGE>
