Abstract (en)

[origin: EP0849047A1] The device has a linearly guided actuating member (1) which is adjustable by a drive (5), an intermediate member (2) and a second actuating member (3). The second actuating member is provided to the clamping arm (4) and is rotatable in a head piece (6) with an articulated connection to the intermediate member. An intermediate piece (7) is positioned between the head piece and the drive, being detachably attached to them and passed through by the linear actuating member. It is provided with device fastening members (8), positioned outside the connection adaptations (A, A') to the head piece and drive.
