Abstract (en)

[origin: EP0849049A1] The operating tool (12) has an angle measuring unit, with an axis of rotation lying coaxial to the rotational axis of the operating tool, being connected with the lever arm of the operating tool, without a direct coupling with the screw connection part to be tightened up. The lever arm is coupled with the angle measuring unit, directly across a follower coupling. The angle measuring is applied at its lever arm, eccentrically to the axis of rotation of the operating tool. The operating tool has a follower head, located rotationally at the lever arm, engaging at the screw connection part. Also there is a tightening coupling (10), between the lever arm and the follower head, following only on a following rotational direction. The tightening coupling is arranged between the lever arm and the follower head. The follower coupling (28), between the lever arm and the angle measuring unit, is also a coupling which only moves in the follower direction of rotation.
