Abstract (en)
The wagon comprises a superstructure (3) with sidewalls, at least one of which has at least one section (7) which can be moved outwards to the side transverse to the longitudinal direction of the wagon. Preferably, both side walls have several, preferably more than three sections, making up more than 70% of the side wall area, which can be moved outwards by 40-150 cm, the sections extending over the complete height of the superstructure. Sections are carried out a parallel swinging arm arrangement (12) with hinged sections, one (12a) fixed to the side wall section and the other fixed to a shaft (14) supported on the superstructure.

Abstract (de)
Schienengebundener Güterwagen mit einem Wagenkasten, der an zumindest einer Stirnseite eine Be- und Entladeöffnung zum Be- und Entladen der zu transportierenden Güter aufweist, wobei zumindest eine Seitenwand des Wagenkastens (3) wenigstens einen quer zur Wagenlängsrichtung seitlich ausstellbaren Seitenwandabschnitt (7) aufweist. <IMAGE>
