Abstract (en)

The invention relates to a process for mixing a detergent and a solubilizer in a mixing system, comprising the steps of: feeding the detergent through a detergent feed line (4) into the system; feeding the solubilizer through a solubilizer feed line (12) into the system; mixing the detergent and solubilizer together at a junction of the feed lines, directing the detergent/solubilizer mixture into a separate mixing chamber (6) of the system, wherein further mixing takes place and, shutting off the detergent feed whilst the solubilizer is continually fed into the system. <IMAGE>
