Abstract (en)  
[origin: EP0849435A2] The power generation plant has a first energy conversion stage (3) for converting primary energy (Ep) into electrical energy (Ee) and thermic energy (Eq), with an evaporator (9) for the latter coupled to a steam turbine (13), followed by a further mechanical/electrical energy conversion stage (15). The first energy conversion stage, the steam turbine and the second energy conversion stage are contained within a first housing (1), with the evaporator contained within a second housing (5), both housings provided by standard containers.
