Abstract (en)
[origin: EP0849525A2] The lamp has a casing pot (10) which can be placed in the ground, and which has an upper surrounding frame in order to accept a glass panel. The frame is designed for the glass to lie flush with the ground, and the upper outside region of the pot has vertical webs which bound the resting surface for the glass, and which at least partly bound the glass itself. The pot can accommodate a small housing pot (30), which contains the electrical equipment for the lamp, and which has at least one sealing element (32) in order to seal the inside (10a) of the casing pot from the outside. The element may have a sealing ring, which is arranged in a groove in the casing pot.
