Abstract (en)
The present invention is a photographic film base comprising a polyester support having a layer thereon. The layer thereon is a polymer/hydrophilic binder blend wherein the polymer contains a photoreactive moiety having an abstractable hydrogen, and the polymer and hydrophilic binder are present in a ratio of from 1:20 to 20:1. The present invention includes a photographic element wherein a light sensitive silver halide emulsion is superposed on the layer. The present invention provides a method of making the film base described above.
