Abstract (en)

[origin: EP0849838A2] The fixing method is used for attaching a connection element (3) to the end of a HF cable (1), with a humidity-tight seal between the connection element and the cable provided by a sealing material (15) between a metal contact (11,12) and the cable conductor (7) and between the contact and the cable insulation mantle (10). A dual-component sealing material is used, its volume increased after assembly of the metal contact, for filling the hollow spaces between the contact and the cable conductor and between the contact and the cable insulation mantle.
