Abstract (en)
[origin: WO9711786A1] Articles coated with a non-metallic continuous phase matrix containing fine metal particles are overcoated with a polymer by continuously moving the articles through a first station in which the articles are immersed in a coating chemical bath (7), a second station for rinsing the articles with a rinse fluid from risers (15 and 19) to remove excess coating chemicals therefrom, and a third station for curing the polymer coating on each article at an elevated temperature in an oven (25).
