Abstract (en)

[origin: WO9709247A1] The invention concerns a packing for a product in powder or tablet form, said packing comprising a container which accommodates and surrounds the product and is protected against accidental opening. The object of the invention is to provide a child-proof refillable packing for a product in powder or tablet form such that expenditure on the packing is low but the packing is nevertheless reliably protected against accidental opening. This object is achieved in that the container takes the form of a closed bag (1, 14) made of a tear-resistant plastics foil.
