Abstract (en)

[origin: WO9710406A1] A device for fitting bar components (12) in a frame (11) has means for securing the frame (11). There is an angle template (7) for inserting the bar component (12) which can be moved freely in a predefined plane in relation to the secured frame (11). The bar component can be secured in any desired reference angular position on said template and slid into the desired fitting position at the correct angle.
