Abstract (en)  
[origin: DE19627840A1] The invention concerns a connection between an electrical connecting lead, which takes the form of a metal-sheathed lead and has at least one electrical inner conductor electrically insulated from the metal sheathing by a mineral, on the one hand, and an appliance, in particular an electrically heatable catalyzer, which is to be electrically connected to the connecting lead, on the other, the inner conductor and the appliance being interconnected by a detachable connection of which one part is disposed on the appliance and the other part is provided at the free end of the connecting lead.
