Abstract (en)

[origin: WO9710683A1] The purpose of the invention is to provide network operators or third parties (such as software companies) with an opportunity to implement their service ideas directly and without passing through a network provider while, at the same time, ensuring that faulty service applications thus implemented do not adversely affect the entire network. This purpose is achieved by a fault-tolerant operational environment system (FAU) as disclosed in this invention.
