Abstract (en)
[origin: EP0850670A1] The in-line roller skate consists of a frame (1) with rollers (2, 3, 4, 5), fastenings (7, 8) for a detachable boot (6), and a brake (9) which is actuated by flexing the leg to operate a lever (11). The brake lever has a rear actuating rod (14) connected to it by an adjustable threaded joint with a locknut (15). The rod is located parallel to the back of the boot and is designed to engage with a recess (19) in a stop (16) projecting from it when the boot is fitted. The lever and rod are held in their upper position by a spring (13).
