Abstract (en)
[origin: EP0850869A1] The support structure comprises a self-supporting three-dimensional body of any selected size. Different extruded sections (8,11,15), screw connections (6,12.1) and composite panels form the cabin. The composite panels possess inherent rigidity and have surfaces facing the interior of the cabin, which have an additional resistant cladding. An installation profile (11) in the form of two side ducts for ventilation and air-conditioning forms part of the cabin's support structure. The back wall (13) consisting of a composite panel is held by corner pieces (8) and is supported and held underneath by a base frame and a base and back wall holder.
