Abstract (en)
[origin: EP0851071A2] The closure comprises a first rail (6a) for fixing on the first structural face (2a) and a second rail (6b) on the second face (2b). A first extra rail (34a) fixes in the corner end area to overlap the first rail or building face and a second extra rail (34b) is similarly applied. The first and second extra rails each have two inclined ends (36) so that the two extra rails can join together selectively to form a closure for an inside corner or outside corner (30). These extra rails can be made of metal or plastics and have double-sided adhesive tape for fixing.
