Abstract (en)

[origin: DE19636091A1] The frame has upright supports (2) and main beams (4), which are attached with their ends to the supports. Secondary supports (6) are supported on the main beams by their lower surface (36) lying the main beams upper surface (34). Panels (8) are located on the secondary beams. A positively formed fixture is provided between the main and secondary beams by an elevatable part of the beams connection, which provides against movement in a specified spatial plane. The fixture is formed by the engagement of a protruding element (42) from the main beam protruding upwards into openings (18) in the secondary beams.
