Abstract (en)

The lock unit comprises: a lock (2) having a latch (6) and means for translating the latch; an electrical striker (3) having a seat (12) engagable by the latch; a block (13) within which the seat is defined, rotatable about a pin (14) between a position in which the latch engages the seat and a position in which the latch is free to leave the seat, and formed in two pieces (31, 34) fixed together, a first piece (31) carried by the pin and the second piece (34) having the seat; means for adjusting the position of the second piece with respect to the first piece; a mechanism (15) for allowing or preventing rotation of the block, and having a first and second lever (18, 23) operable to assume an engaged position to prevent rotation of the block and a disengaged position to allow rotation of the block, and a translatable element (28) pressed by the latch towards the first lever; and an electrical device (16) for controlling the mechanism. The unit includes an intermediate member (42) for transmission to the element (28) of the pressure exerted by the latch (6) when this engages the seat (12). <IMAGE> <IMAGE>
