Abstract (en)  
The housing (1) for the roller blind (4) is prefabricated and has prefabricated guide rails (3) for the blind. The housing is attached to the window sash (2) before installation. The position of the housing in relation to the sash can be adjusted from the initial position after the sash has been installed in a window opening. The housing can be positioned so that it allows free access to the joint between the sash and the window frame at the top of the window. It can also be positioned so that the housing is in contact with the upper wall (9) of the window. The housing is positioned with two plates (11) fixed to the vertical uprights of the sash, each with a vertical groove (13). A lug (15) at the end of the housing fits into the groove to allow adjustment.
