Abstract (en)
[origin: WO9703896A1] A tablet container wherein the tablets to be administered in an ever-increasing dose are arranged according to the dose necessary for each administration time for each day without fail while avoiding troublesome checking procedures. The container is composed of a container body (4) provided with a number of breakable compartments (2) for each tablet on a sheet and a pair of mounts (5) sandwiching the container body (4) between themselves and having openings (6a) from which the compartments (2) are exposed. The openings (6a) are arranged in a matrix wherein one of the row and column refers to the data and the other of them refers to each of the administration times for each day. The mounts (5) have outer frames (9) each enclosing the opening(s) (6a) corresponding to the dose(s) for each day and inner frames (10, 11, 12) each enclosing the opening (6a) corresponding to the dose for each administration time.
