Abstract (en)
[origin: WO9712766A1] A ring-shaped element is mounted in a continuous groove of a cylindrical section of a first body. The ring-shaped element (10) protrudes out of the groove and lies against the inner face of a cylindrical section of a second body that may be inserted on the first body. The ring-shaped element (10) has on its outer surface (12) a plurality of projections (14). A pair of projections (18) on the inner surface (16) is associated with each outer projection (14). The inner projections (18) are symmetrically offset sideways in relation to the corresponding outer projection (14).
