Abstract (en)  
[origin: DE19536480C1] The invention concerns a system for dispensing sheet material, in particular bank notes and the like, from one of two sheet compartments to a collecting station, each compartment having a delivery roller which is driven by a stepping motor, is associated with a sheet compartment and acts on the first sheet of each stack. Each sheet drawn off is fed to a conveyor roller which is driven by a stepping motor and is also associated with the sheet compartment. The conveyor roller feeds the sheet to a dispensing conveyor common to both sheet compartments. The system is driven by two stepping motors which can be driven in opposite senses when a sheet is dispensed from a compartment, so that in each case one delivery roller is driven in the first sense of rotation and the conveyor roller of the other sheet compartment is driven in the second sense of rotation.
