Abstract (en)
[origin: DE19536276A1] A printed circuit board coupler has a cuboid housing (10) which can be soldered externally, is made of conductive material and into which an inner conductor connection member (15) is inserted in an insulated manner. The connection member (15) is partially extrusion-coated with a plastics part (21) and guided to the exterior by an angled connection element (18). The printed circuit board coupler can thus be soldered with the housing (10) itself and the angled portions (19, 20) of the inner conductor connection member (15) in a horizontal or vertical position on a printed circuit board using the SM technique.
