Abstract (en)

[origin: EP0853005A1] A method of manufacturing labels with a basic information field, and a number of fields of fixed or variable data on peel-off labels involves preparing and printing a web of paper or similar material on one side with the basic information field (1), together with the variable elements for the label sheet (12a,13a) and for the separate labels (12b-12f,13b-13f), with a lateral gap between them for spacing on the web to give the sheets and labels. The other side of the web is covered by a layer of silicone (8) and at least one layer of adhesive (10) in place at the labels to be held at the web. One strip of the web is turned over to place the printed labels at the layers of silicone and adhesive. Also claimed is a label with a base sheet (2) to carry at least one variable description (12a,13a) and a cladding (9) over at least part of the sheet surface. At least one label (11a-11e) is held by a layer of silicone and adhesive, defined by cutting through the cladding, with further variable data labels (2b-2f,13b-13f) identical to the variable descriptions at the base sheet. The sheet and the cladding are from the same paper web.
