Abstract (en)

[origin: EP0853063A1] The hand pump has a flexible pressure ball (12), two non-return valves (20), a suction hose or pipe (36) and a pressure-side spray-nozzle (38). A collector-container (44) open at the top and positioned around the nozzle is closed by a peripheral wall (46). The top rim (48) of the wall protrudes above the outlet end (42) of the nozzle and is at a tangent to a plane at right angles to the axis containing the nozzle and non-return valves in a tolerance range of at most +/- 20 degrees. The cleaning appliance is turned upside down with its collector-container as stand. The container is detachably fixed to the cleaning appliance (10).
