Abstract (en)
[origin: EP0853172A2] The blind has a tensioner with traction or compression springs (13) mounted in longitudinal tension rails (12) along its horizontal or inclined upper cover surfaces. The cable pulleys (16) are connected to a tension rod (17) which is parallel to the drop rod and is guided in the longitudinal rails. The tension rod engages behind the drop rod to move this in the horizontal or inclined arms of the guide rails (1) up into the area of the bend at the transition to the vertical glass wall.
