Abstract (en)

[origin: DE19653714C1] The device transmits the control signals between a bus-line (1) and a number of controlled valves (7-10,13,14) of a valve block via interface elements (3-6,11,12) with input and output contacts for connecting the interface elements in series. Each interface element is associated with at least one valve, with its input contacts coupled to its output contacts via internal cables, with active interface elements (3,11) each provided with a decoder chip connected to the bus-line and having control terminals for the associated valve and further terminals coupled to the other valves via respective passive interface elements.
