Abstract (en)

[origin: WO9709900A1] The present invention relates to an apparatus for the application of a more or less viscous liquid product. Said apparatus is essentially comprised of a reservoir (R) forming itself a push-button mounted axially movable into a body (12) against the force of a spring (13) arranged between the reservoir (R) and a magnetic element (1) so that in the pushed up position of the reservoir (R) into the body (12) a brush (10) penetrates into the reservoir (R), and in a retracted position of the reservoir (R) in the body (12) the brush (10) is in a position out of the reservoir (R). This apparatus is particularly intended to the application of nail varnish.
