Abstract (en)
[origin: WO9712537A1] The invention relates to a vaccum cleaner comprising a suction system (2) provided with a filter (2a), a compartment (1) situated above a tight bag (20) for collecting waste material, a hose (4) opening into the tight bag (20), a pressure tap (5) communicating with the container, a complementary filtering means (25) associated to the tight bag (20) and covering at least partially the interior volume (21) of said tight bag (20) and providing on the one hand for a charge loss in the sucked air flow (20) and on the other hand generating in the container (3), outside the tight bag (20), a vaccum higher than that prevailing inside said tight bag (20). According to the invention, the tight bag (20) is intended to be set in place into the container (3) independently of the complementary filtering means (25).
