Abstract (en)

[origin: WO9711788A1] A method to extend the functional life of wood structures (2) such as telephone poles, utility poles, pilings and foundations by controlling the activity of wood decay organisms while minimizing the use of environmentally hazardous chemicals. The method comprises applying a microbial treating solution to a portion (3) of the wood structure subject to decay from microbial organisms and covering the treated portion of the wood structure with an insect impenetrable material (4).
