Abstract (en)

[origin: WO9713902A1] A method for the automatic extraction of a short weft yarn from the shed of a gripper loom comprises, upon detection of the error, the following stages: deactivating the cutting means (M) and the weft feeding devices (F) stopping the loom, moving the loom backwards into the position where the faulty weft (A) was inserted; selecting the weft feeding device (F) on the same faulty weft and inserting across the shed with the new weft grippers (C, R) a new weft (A') connected to the faulty weft; recovering the new weft launched and hence the faulty weft (A) on the weft insertion side; moving the loom backwards so as to bring it back into the position where the faulty weft (A) was inserted.
