Abstract (en)

[origin: US6056002A] An assembling module (10) for the sanitary plumbing of a building has one or several conduit portions (14, 16) which are tightly connected with a shut-off device (18) and a meter base (20) each. The conduit portions (14, 16) and the shut-off devices (18) as well as the meter bases (20) are arranged in a parallelepiped-shaped foamed encapsulation (12) which locates the foam-encapsulated parts in a three-dimensionally secure manner and simultaneously constitutes the outer surface of the assembling module (10). The foamed encapsulation (12) is moisture-repellent and has a density of at least 50 kg/m<sup>3</sup>. At each end of the conduit portions (14, 16) a connection socket (22) is arranged which protrudes outwardly from the foamed encapsulation (12). At two opposite sides of the assembling module (10) one fixing element (26) each can be arranged within the foamed encapsulation (12), at which brackets (28, 30) are attached for mounting the assembling module (10). The assembling module (10) lends itself to an economic manufacture, easy installation and convenient tiling.
