Abstract (en)  
[origin: EP0853902A2] The latex or polyurethane foam mattress includes ventilation channels (7) which when the mattress is stressed by the user close up through the deformation of the material. The ventilation channels have at least one area which includes an angle greater than zero with the perpendicular to the couch surface. The ventilation channels can be curved or angled and have at least one section running parallel to the couch surface. The ventilation channels have two blind-hole sections (8,9) extending perpendicularly from a flat side of the mattress body and connected together through curved connecting channel (12).
