Abstract (en)

[origin: EP0853914A1] The cabin or wall has a swing door (12) or swivel panel mounted on swing bearings. The door has a U-shaped edge border (16) with two parallel arms (20,20'), fitted along the door's bottom edge (14). On one of its edges, the border has a strip (24) which holds a drainage channel (30) that extends along the inside of the door. A clamp arm part (32) of the channel is held in place between the strip and the interior arm (20) of the border. The strip is attached by its upper section (22) to the top of the inside arm so that it slopes downwards over the entire width of the door. A drainage outlet is located at the foot of the strip slope at or close to the bottom swing bearing.
