Abstract (en)
A container (2) comprising a body portion (4) and a closure device (6), the closure device (6) being such that the contents of the container (2) are able to be dispensed through the closure device (6), the closure device (6) comprising a movable portion (10) which is slidable in a longitudinal direction from a closed position to an open position, the movable portion (10) having at least one dispensing aperture (12), and the container (2) having at least one obturator member (14) which blocks the dispensing aperture (12) when the movable portion (10) is in the closed position and which does not block the dispensing aperture (12) when the movable portion (10) is in the open position. <IMAGE>
