Abstract (en)
[origin: EP0854252A2] The insulation (25) is an elastic layer which can be compressed. The insulation is compressed by a given amount through the mounting points at the roof (35) through the shaft lengths of the mountings (41). The mounting has a threading (45) and a limit section to define the depth of screw threading. It has preferably a penetration point (43). The thermal insulation is preferably of mineral fibre boards, of rock wool. The vapour barrier (23) is an elastomer bitumen web.
