Abstract (en)

[origin: US6027002A] PCT No. PCT/FR96/01110 Sec. 371 Date Apr. 10, 1998 Sec. 102(e) Date Apr. 10, 1998 PCT Filed Jul. 17, 1996 PCT Pub. No. WO97/13440 PCT Pub. Date Apr. 17, 1997A dispenser apparatus includes a loading device for sensing when an initial working roll of web material previously positioned in a receptacle is empty, so that it can be replaced with a fresh second roll positioned between a pair of flanges. The loading device includes a first mechanism fixed within a hinged cover of the apparatus including a movable tab in a position substantially opposite the point where the material web is inserted and placed on a drum. The device further includes a second mechanism extending from the apparatus housing which is activated when the cover is closed to sense when the initial roll is empty and to control the actuation of the mechanism to load the web from the fresh second roll.
