Abstract (en)

[origin: DE19537906A1] The invention concerns a method of testing the state of development of a photographic film in a light-proof cartridge. According to the invention, the leading edge of the film is pulled out of the cartridge, the film is positioned between a light source and a photosensor, and the amount of light passing between the light source and photosensor is measured, the state of the film being recognized as undeveloped if a small amount of light passes therebetween.
