Abstract (en)
[origin: EP0855474A2] The holder (1) can slide along the wall pole (5) without the need of an adjusting device. It has at least one slide ring (8,9) which surrounds the pole. At least one ring (9) exerts a self-inhibiting frictional force, and is provided with an adjustment unit (10) for adjusting the frictional force. The adjustment unit has an adjustment region which encompasses common tolerances for wall poles. The adjustment unit has a clamping unit (13,14) with which a clamping force can be exerted via the slide ring onto the pole.
