Abstract (en)

[origin: WO9712575A1] An absorbent material having substantially improved liquid permeability such that it is not subject to gel blocking while maintaining preferred absorbent capacity. The absorbent material comprises (a) a plurality of absorbent gelling particles comprising a water-insoluble, absorbent, hydrogel-forming polymer; and (b) a polycationic polymer covalently bonded to the absorbent gelling particles; wherein the absorbent material has a Saline Flow Conductivity, greater than $(500-11.5 \cdot GV)(10^{-7}) \text{ cm}^3/\text{sec/g}$, wherein GV is the gel volume of the absorbent material.
