Abstract (en)
[origin: WO9714834A1] Weft cutting device for looms, of the type comprising a pair of control members (D) rotating about a working axis (B) parallel to the main axis of the loom, a corresponding pair of cutting members (F, T) rotating about an axis (G) inclined in respect of said working axis (B), and motion transmission means between said control members and said cutting members. In said device, the motion transmission means consist of a pair of thin rods (2), the ends of which are rigidly connected to said control members (D) and, respectively, to said cutting members (F, T).
