Abstract (en)
[origin: WO9807991A1] The invention concerns an impeller and a blower device comprising such an impeller, the impeller comprising a plurality of blade elements (1) which are disposed successively about a centre of rotation and have a front face and a rear face (3, 4). The base region of at least one of the blade elements (1) provided on the impeller has projections (2) extending over a surface defined by the rear face and/or front face (4, 3) of the blade. The impeller and the blower device are characterized by reduced noise emission.
