Abstract (en)

A divider track is used for installing wood molding and laminate covered molding. A divider track having a pair of spaced apart flanges extending at a right angle from the front surface of the divider track is affixed to a surface. Kerfs cut on the back surface of molding is positioned over spaced apart flanges extending at a right angle from the front surface of the divider track. Pressure is applied on the front surface of the molding for seating the molding on the divider track. Serrations extending along the interior upper surfaces of the flanges aid in interlocking with kerfs cut on the back surface of the molding. <IMAGE>
