Abstract (en)
The vehicle windows are fitted with servo drives and with separate operating controls, as well as safety systems which detect obstructions and reverse the servo closing drives. Other servo drives operate the central locking system for the doors. A security control (8) locks all the doors and closes all the windows, while inhibiting the obstruction safety interlocks. This enables the driver to secure the vehicle from the inside in an emergency. The emergency locking sequence is only possible from inside the vehicle and with the ignition key in position. The security switch can be reached by the driver and passenger and also operates a warning signal.

Abstract (de)
Die Erfindung bezieht sich auf eine Vorrichtung zum Öffnen und Schließen von Fenstern (1a, 1b, 1c, 1d) eines Kraftfahrzeuges mit unabhängig voneinander durch Betätigungselemente (5a, 5b, 5c, 5d) auslösbaren, hilfskraftbetätigten Fensterhebern (4a, 4b, 4c, 4d) und einer Einklemmschutz-Vorrichtung (7). Dabei ist erfindungsgemäß ein zusätzliches Betätigungselement (8) vorgesehen, mit dem die Verriegelungsvorrichtungen (3a, 3b, 3c, 3d) des Fahrzeugs auslösbar, die Einklemmschutz-Vorrichtung (7) deaktivierbar und die Fensterheber (4a, 4b, 4c, 4d) gemeinsam in ihre Schließstellung bringbar sind. <IMAGE>
