Abstract (en)

[origin: EP0856657A2] The EGR valve has a rotary drive (25) for the setting unit (23). A powered conversion unit (27), after the drive (25), converts the rotary movement of the drive (25) into the translatory movements for the operating member (20) with the valve component (18). The valve component (18) has a side (19) at the valve seat (17) towards the operating member (20), to be moved towards the exhaust entry side (15) into the open setting.
