Abstract (en)  
[origin: WO9716305A1] The invention relates to a pelletising device for loose, dry waste material, which device has a rotationally fixed, hollow cylindrical housing (1) with a vertical axis (5) and a pressure member (7) which is provided with a drive member (4) rotating about the housing axis (5) inside the housing (1). Pressure tools (9) which project in the form of rays penetrate into radial housing (1) openings (10) producing a pressure resistance when the pressure member (7) is rotated; they withdraw from the openings (10), thereby pressing the material outwards.
