Abstract (en)

[origin: WO9748602A1] The invention discloses in particular a method for controlling the direction of movement of an air carrier comprising a source of energy (10), at least one rudder unit (9), at least one actuator (13) acting on these rudder units (9), and control logic (12) for controlling the actuator, characterised in that it comprises a step of controlling the force exerted by the actuator (13) on the rudder unit (9). The invention is useful for any type of aircraft, aerostat or space vehicle.
