Abstract (en)

A method for producing a coating film is provided, which enables continuous coating of a base having a large surface area, which achieves high productivity, and by which ultra-thin films having highly uniform film thickness. This method including the step of continuously applying a coating liquid containing 0.05 to 40 wt % solid component to a base with a gravure roll to form a coating film having the dry thickness of 0.005 to 1 μ m.
